Brief Description of Arguments to be Presented:

8 (currently amended). A pedal security system for pedal mounting, particularly in motor vehicles, comprising:

a pedal rotatably mounted by means of a pedal axis; and

a pedal block including a wall having defined therein an opening for receiving and retaining the pedal axis[[:]]; a slot adjacent to the opening, and lateral walls,

the lateral walls including a first lateral wall that completely separates the opening and the slot and at least a second lateral wall that extends longitudinally within the slot between a first end and a second end and supports the first lateral wall,

the pedal axis engaging the first lateral wall and breaking the first lateral wall by exceeding a mechanical limit loading of the pedal axis, whereby the slot receives the pedal axis.

An interview was conducted on the above-identified application on _____ .
